LAB EXPERIMENTS **DATE: 12/07/2026**

EXPERIMENT 3 – DML Commands (INSERT, SELECT)

AIM:

To create and manage the database structure for a **Flight Reservation System** using Data Definition Language (DDL) commands such as **CREATE, ALTER, DROP, TRUNCATE, and RENAME**.

PROCEDURE:

1. Open MySQL and create the database for the Flight Reservation System.
2. Use the CREATE command to create required tables such as Flight, Passenger, and Booking with suitable attributes and data types.
3. Use the ALTER command to add, modify, or remove columns from an existing table.
4. Use the RENAME command to change the name of an existing table.
5. Use the TRUNCATE command to remove all records from a table while keeping its structure.
6. Use the DROP command to permanently delete an unwanted table from the database.
7. Use DESC table_name; or SHOW TABLES; after the operations to verify the changes.
8. Execute each command and observe the output to ensure that all DDL operations are performed successfully.

PROGRAM:

1. CREATE TABLE:

```
CREATE TABLE student_details (
student_id INT PRIMARY KEY,
student_name VARCHAR(50),
department VARCHAR(50),
semester INT,
cgpa DECIMAL(3,2)
);
```

OUTPUT:
